

CLOUDCHASERZ

AWANZ POS

Elevate Your Smoking Experience

Training & Access Guide

Everything a store associate, a store manager, the warehouse admin and head office need to open the till, run the day and close it — with every login, every screen and every step written out.

PRODUCT	AWANZ POS by CloudChaserz · release v0.9
LIVE SITE	https://cloudchaserz.frappe.cloud
ESTATE	11 stores across Houston and Oklahoma, plus the HOU-WH Houston main warehouse
AUDIENCE	Store associates · store managers · warehouse admin · head office
ISSUED	24 August 2026
TENANT	CloudChaserz World LLC · support@cloudchaserzworld.com

SECTION 1

Before you start

What this guide covers, the shape of the business it describes, and how to read it.

1.1 What this guide is, and who it is for

This is the working manual for **AWANZ POS by CloudChaserz** — the point-of-sale, warehouse and head-office platform running at <https://cloudchaserz.frappe.cloud>. It is written to be used at the counter: every procedure is a numbered list you can follow with a customer standing in front of you.

Four audiences, four sections. **Store associates** need Section 4. **Store managers** need Section 4 and Section 5. The **warehouse admin** in Houston needs Section 6. **Head office** needs Section 7. Everyone needs Sections 2, 3, 8 and 9 — the logins, the URLs, the rewards programme and what to do when something goes wrong.

1.2 The estate in one paragraph

CloudChaserz runs **eleven stores** — one in Houston (Montrose, which is also the head-office store) and ten across the Tulsa metro and wider Oklahoma — plus one **main warehouse**, `HOU-WH`, at the Houston head office. All of them run on a single cloud site. A store sells; the warehouse ships to stores and never sells. Head office watches the chain from the Command dashboard. Customers can also buy online at `/shop` and collect in a store. Everything the customer or an associate reads — the wordmark, the product name, the rewards copy — comes from the tenant's brand settings, which is why every screen says CloudChaserz.

1.3 Conventions used here

- A path in `this typeface` is a URL on the site, an e-mail address, a document type or a field name. Type it exactly as printed.
- **"Tap"** is used throughout because the till is a touchscreen; on a laptop it means click.
- A **store code** such as `OK-BIX` identifies a store everywhere in the system — in logins, in stock records, in the dashboard and on shipping labels.
- **Store**, not "boutique". Some older screens and reports still carry the word boutique in field names; it means the same thing.
- Money is US dollars, times are **America/Chicago**, and every store's day boundary is the site's, not the device's.

A NOTE ON ACCURACY

Every credential, PIN, URL, threshold and screen name in this guide was taken from the platform's own source and from the final acceptance run carried out on the live site on 24 August 2026 (124 of 124 checks passed). Where a behaviour has a limit or a caveat, it is printed with the behaviour rather than left out.

SECTION 2

Every login

One password for every demo account, one PIN per person at the till. Read 2.6 before you trade for real.

⚠ THESE ARE SHARED DEMO CREDENTIALS

Every account below uses the same password, `cloud123`, and the PINs are seeded constants that are identical on every CloudChaserz site. **They are a convenience for training, not credentials.** A site holding these logins must not hold real customer data, and this site must be re-credentialed before the first real sale — see 2.6.

2.1 How the accounts are named

Every store login is built from the store code, **lower-cased with the dash replaced by a dot**, then the role. So `OK-SAP` becomes `ok.sap`, and its manager is `ok.sap.manager@cloudchaserz.example`. The two associates are `.a1` and `.a2`. Head office, the warehouse and the two regionals have plain names. Below, **[store]** stands for that lower-cased code.

PATTERN	ROLE	PIN
<code>[store].manager@cloudchaserz.example</code>	AWANZ Manager	unique to each store — see 2.2
<code>[store].a1@cloudchaserz.example</code>	AWANZ Associate	2580
<code>[store].a2@cloudchaserz.example</code>	AWANZ Associate	1357

Password for all of them: `cloud123`

2.2 The 11 stores — managers and associates

Thirty-three store logins. **Each manager has their own PIN**; the two associate PINs are the same in every store, which means an associate PIN identifies the seat, and the name you tap on the unlock screen identifies the person. Tap the wrong name and the PIN will be refused.

STORE	ROLE	E-MAIL (USERNAME)	NAME	POS PIN
HOU-MTR CloudChaserz Montrose	Store manager	hou.mtr.manager@cloudchaserz.example	Marisol Vega	1101
HOU-MTR	Associate	hou.mtr.a1@cloudchaserz.example	Dante Ruiz	2580
HOU-MTR	Associate	hou.mtr.a2@cloudchaserz.example	Keisha Brown	1357
OK-SAP CloudChaserz Sapulpa	Store manager	ok.sap.manager@cloudchaserz.example	Travis Holt	2202
OK-SAP	Associate	ok.sap.a1@cloudchaserz.example	Amber Lee	2580
OK-SAP	Associate	ok.sap.a2@cloudchaserz.example	Cody Pratt	1357
OK-BA CloudChaserz Broken Arrow	Store manager	ok.ba.manager@cloudchaserz.example	Lena Gonzalez	3303
OK-BA	Associate	ok.ba.a1@cloudchaserz.example	Tyler Moss	2580

STORE	ROLE	E-MAIL (USERNAME)	NAME	POS PIN
OK-BA	Associate	ok.ba.a2@cloudchaserz.example	Jada Carter	1357
OK-BIX CloudChaserz Bixby	Store manager	ok.bix.manager@cloudchaserz.example	Omar Haddad	4404
OK-BIX	Associate	ok.bix.a1@cloudchaserz.example	Brianna Cole	2580
OK-BIX	Associate	ok.bix.a2@cloudchaserz.example	Luis Ortega	1357
OK-STUL CloudChaserz South Tulsa	Store manager	ok.stul.manager@cloudchaserz.example	Priya Natarajan	5505
OK-STUL	Associate	ok.stul.a1@cloudchaserz.example	Ethan Reed	2580
OK-STUL	Associate	ok.stul.a2@cloudchaserz.example	Sierra Blackfox	1357
OK-OWA CloudChaserz Owasso	Store manager	ok.owa.manager@cloudchaserz.example	Derrick Hale	6606
OK-OWA	Associate	ok.owa.a1@cloudchaserz.example	Mia Tran	2580
OK-OWA	Associate	ok.owa.a2@cloudchaserz.example	Jordan Pike	1357
OK-MUS CloudChaserz Muskogee	Store manager	ok.mus.manager@cloudchaserz.example	Tasha Bigpond	7707

OK-MINGO	Associate	ok.mingo.a1@cloudchaserz.example	Hannah Yu	2580
OK-MINGO	Associate	ok.mingo.a2@cloudchaserz.example	Marcus Dill	1357
OK-ETUL CloudChaserz East Tulsa	Store manager	ok.etul.manager@cloudchaserz.example	Sofia Mendez	9909
OK-ETUL	Associate	ok.etul.a1@cloudchaserz.example	Blake Owens	2580
OK-ETUL	Associate	ok.etul.a2@cloudchaserz.example	Rhea Patel	1357
OK-YALE CloudChaserz Yale	Store manager	ok.yale.manager@cloudchaserz.example	Grant Foster	1212
OK-YALE	Associate	ok.yale.a1@cloudchaserz.example	Lily Nguyen	2580
OK-YALE	Associate	ok.yale.a2@cloudchaserz.example	Isaac Tiger	1357
OK-JENKS CloudChaserz Jenks	Store manager	ok.jenks.manager@cloudchaserz.example	Chloe Barnes	1313
OK-JENKS	Associate	ok.jenks.a1@cloudchaserz.example	Mason Kirk	2580
OK-JENKS	Associate	ok.jenks.a2@cloudchaserz.example	Aaliyah Scott	1357

MANAGER PINS AT A GLANCE

HOU-MTR 1101 · OK-SAP 2202 · OK-BA 3303 · OK-BIX 4404 · OK-STUL 5505 · OK-OWA 6606 · OK-MUS 7707 · OK-MINGO 8808 · OK-ETUL 9909 · OK-YALE 1212 · OK-JENKS 1313

2.3 Head office, warehouse and regional

E-MAIL	NAME	ROLE	WHAT THEY CAN OPEN	PIN
hq@cloudchaserz.example	Hunter Quinn	AWANZ Head Office + Sales, Accounts and Stock Manager	Everything. /pos · /awanz-dashboard /warehouse · /warehouse-wall /salon · /shop · /rewards · /app	0000
warehouse@cloudchaserz.example	Walter Hines	AWANZ Warehouse Admin + Stock User, Stock Manager, Purchase User	Cannot sell. /warehouse · /warehouse-wall /pos · /salon · /shop · /rewards	0000
regional.ok@cloudchaserz.example	Rosa Kingfisher	AWANZ Regional (Oklahoma + Tulsa Metro) + Sales Manager	Their region, read-only. /pos · /awanz-dashboard /salon · /shop · /rewards	0000
regional.tx@cloudchaserz.example	Ray Torres	AWANZ Regional (Houston) + Sales Manager	Their region, read-only. /pos · /awanz-dashboard /salon · /shop · /rewards	0000

Password `cloud123` for all four. These four accounts are not meant to ring sales — they exist to approve, watch and ship — but the seed does give each of them a POS record with the PIN `0000`, so they can unlock a till if they have to. Change these first.

2.4 The storefront shopper

E-MAIL	NAME	PASSWORD	WHAT IT IS FOR
shopper@cloudchaserz.example	Jordan Vance	<code>cloud123</code>	A customer account on the public storefront: sign in at <code>/shop</code> , fill the bag, check out with click & collect, and watch the order appear in a store's Web orders queue. Real shoppers create their own account at <code>/shop/register</code> , which signs them in immediately — no e-mail server needed.

2.5 What the PIN is, and what happens when it is wrong

- The **password** signs you in to the site. The **PIN** unlocks the till for one person, so every sale carries the name of who rang it.
- PINs are 4 to 6 digits and are stored hashed. Nobody — not a manager, not head office — can read a PIN back out of the system; a forgotten PIN is reset, never looked up.
- **Five wrong attempts locks the PIN.** The screen then says “PIN locked after too many failed attempts; ask a manager to reset it” — which is a different message from “incorrect PIN”. A manager clears it with a reset (5.6).
- Guessing is also rate limited: 20 attempts per associate per five minutes.

2.6 Security — read before the first real sale

⚠ RE-CREDENTIAL THIS SITE BEFORE REAL TRADING

The passwords and PINs in this guide are shared constants that ship with the demo seed and are the same on every CloudChaserz site. Anyone who knows a person's role knows their credential. Before the site takes a real customer's money or holds a real customer's details:

- 1 **Give every person a new password.** Head office resets them from the admin desk (/app → User), or each person sets their own from the forgot-password link.
- 2 **Give every associate a new PIN** — a manager can do this for their own store's associates from the POS (see 5.6); head office can do it for anyone.
- 3 **Change the site administrator password** and remove any account nobody uses.
- 4 **Delete or disable the four demo shopper and test-customer accounts** so they cannot be used to place orders.
- 5 **Confirm the tax rates with the CPA** before the first live sale — see the warning in Appendix A.

The full permission model — who may do what, what is deliberately not locked down, and why — is documented in docs/security.md in the platform repository. Read it before granting anyone the Head Office role.

Three things the platform already does for you

- **A store manager cannot promote themselves.** The role, the store and the user on an associate record are protected fields; an attempt to change them over the API returns **403**, and nobody can grant a rank above their own.
- **A store user cannot read another store's data.** Every endpoint checks the caller's store, and so do desk list views and single-document reads. A manager asking for another store's invoices gets an empty list, not somebody else's numbers.
- **PIN hashes are unreadable.** They are encrypted out of the table entirely, so they cannot be listed, filtered on, or taken away to be cracked offline.

SECTION 3

The screens and their URLs

Nine addresses. Everyone only needs to remember the first one.

3.1 /start — the launcher, and why you land there

Sign in at <https://cloudchaserz.frappe.cloud/login> with your e-mail and password. **Whoever you are, you land on /start**. That is deliberate: the underlying framework would otherwise drop a shop-floor associate into the accounting desk. **/start** is a branded launcher that lists exactly the screens your account may open, names the store you work in, and carries “Powered by Futonix.com” at the foot.

Teach staff one URL: **<https://cloudchaserz.frappe.cloud/start>**. Add it to the home screen of the till. Everything else is one tap from there.

TIP — ADD THE TILL TO THE HOME SCREEN

On the iPad or iPhone, open **/pos** in Safari and use **Share → Add to Home Screen**. The point of sale then opens full-screen as an app and keeps its offline catalogue between shifts. Do the same on the client-facing iPad for **/salon**, and on the wall PC for **/warehouse-wall**.

3.2 The URL table

URL	WHAT IT IS	WHAT YOU DO THERE
/start	The launcher	Where signing in lands you. Lists only the screens your role may open, and names your store.
/pos	Point of sale	The till. Sell, take returns and exchanges, receive deliveries, run cycle counts, handle web orders, clock in and out, close the day. Works offline.
/awanz-dashboard	Command dashboard	The head-office wall: Live, Stores, Products, Clients, Insights, Reports. Head Office and Regional only. The old /maison-dashboard address still redirects here.
/warehouse	Warehouse desk	Houston: approve or reject store replenishment requests, pick, pack, buy labels, ship, and resolve receiving discrepancies. Warehouse Admin and Head Office only.
/warehouse-wall	The 55-inch shipping wall	A five-column kanban board for the packing floor, with age timers and silent auto-printing of packing lists and labels. Runs unattended in kiosk mode.
/shop	The online store	Public storefront: browse, bag, check out, and choose a store to collect from. Public.
/rewards	CloudChaserz Rewards	The public programme page, the giveaways and events running now, and the join form. Public.
/salon	Client display	The customer-facing second screen at the counter. Pair it to the till with a six-digit code; it mirrors the basket, the payment and the receipt. Public URL, but useless until it is paired.
/app	Admin desk	Accounting, stock, price approvals, campaigns, coupons, settings and the report library. Head Office and System Manager only.

Two more addresses staff will see but never type: `/r/<token>` — the public receipt behind the QR on every printed receipt — and `/shop/register`, where a new shopper creates an account.

3.3 Who can open what

ROLE	SCREENS LISTED ON <code>/start</code>
AWANZ Associate	<code>/pos</code> · <code>/salon</code> · <code>/shop</code> · <code>/rewards</code>
AWANZ Manager	<code>/pos</code> · <code>/salon</code> · <code>/shop</code> · <code>/rewards</code>
AWANZ Warehouse Admin	<code>/pos</code> · <code>/warehouse</code> · <code>/warehouse-wall</code> · <code>/salon</code> · <code>/shop</code> · <code>/rewards</code>
AWANZ Regional	<code>/pos</code> · <code>/awanz-dashboard</code> · <code>/salon</code> · <code>/shop</code> · <code>/rewards</code>
AWANZ Head Office	<code>/pos</code> · <code>/awanz-dashboard</code> · <code>/warehouse</code> · <code>/warehouse-wall</code> <code>/salon</code> · <code>/shop</code> · <code>/rewards</code> · <code>/app</code>

A manager and an associate see the same list — the difference between them is not which screens they can open, but what those screens let them do (approvals, staff, price changes) and, in the manager’s case, the reports for their own store.

ABOUT THE ADMIN DESK LINK

The card grid on `/start` correctly hides the **Admin desk** card from associates and store managers — but the footer link row below it currently shows the link to everyone. That is a known cosmetic inconsistency, not a data leak: a store user who opens `/app` sees only their own store’s records, and none of the underlying framework’s own branding.

Store managers legitimately need it — a price change request is raised there (5.1). Tell associates they have no reason to open it.

SECTION 4

Associate — how to

The counter, start to finish. Follow these with a customer in front of you.

4.1 Open the till

- 1 Open `https://cloudchaserz.frappe.cloud/start` and sign in with your e-mail and password (`cloud123` on this training site). Tap **Point of sale**.
- 2 The first time on a new device, pick your **store** from the list. The device remembers it.
- 3 Wait for the **catalogue** to load. It downloads once and is then cached on the device — around 160 items with prices, tax and reward tiers. You will see the tiles fill in.
- 4 Tap **your own name** in the associate list. Not a colleague's — the PIN belongs to the name.
- 5 Key your **4-digit PIN**. The till unlocks on the Sell screen.

CLOCK IN AT THE SAME TIME

The unlock screen has a three-way switch: **Unlock** · **Clock in** · **Clock out**. Choose **Clock in** before keying the PIN and the same PIN both starts your shift and opens the till. See 4.11.

4.2 Ring a sale

- 1 **Add the items**. Tap a tile, use the search box (Search name, code or serial), filter by department, or scan the barcode (4.3).
- 2 Change the **quantity** on the basket line, or give a **line discount** by tapping the amount field on the line.
- 3 If a promotion is running it applies automatically and shows in the **Promotions** chip. Type or scan a **coupon code** in the same sheet.
- 4 Attach the customer if they are a member (4.5) — do this **before** you take payment, or the points are lost for that sale.
- 5 Tap the total to go to **Pay**.

4.3 Scan a barcode

Two ways, and both land in whatever screen is open — Sell, Returns, Cycle count or Receive.

- **A Bluetooth or USB scanner** (Socket Mobile S740, Zebra CS6080, Inateck and the like) types the code straight into the till. Nothing to press: just scan.
- **The device camera** — tap the scan button and hold the code in the frame.

The till understands four kinds of label: **EAN-13** on an item ticket, **Code-128** on a serial label, a **QR** on a customer's card (adds the client), and the **QR on a receipt** (opens that sale in Returns).

IF THE SCAN TYPES INTO THE SEARCH BOX

The wedge listener deliberately ignores scans while the cursor is in a text field. Tap somewhere outside the box and scan again.

4.4 Age-verify a 21+ item

Every product in a restricted group is flagged. The moment you add one, the till stops and shows **CHECK ID · 21+** — **before** the item reaches the basket. Nothing is sold until it passes.

- 1 Ask for the customer's driver's licence or state ID.
- 2 **Scan ID** — scan the PDF417 barcode on the back of the licence. The date of birth, the expiry, the initials and the issuing state are read on the device.
- 3 Or **Enter DOB** — read the date of birth off the ID yourself and key it, with the expiry if you have it and the customer's two initials.
- 4 The result is one of: **Verified** (the item goes in the basket) · **Underage** · **Expired** · **Unreadable** · **Declined**.
- 5 Underage or expired means **refused**. Say so plainly and remove the item. Do not sell it.

WHAT THE SYSTEM KEEPS — AND WHAT IT DOES NOT

The record stores only the **outcome**: verified or not, the reason, whether you scanned or keyed it, the two initials, the issuing state, the store, who checked and when. The barcode payload, the full name, the licence number, the address and the exact date of birth are **never written to the database**. Tell customers that if they ask — it is printed on the screen under the scan box.

The receipt prints **ID CHECKED · 21+ VERIFIED**, and the client display shows "Please present your ID" while the check is open. The minimum age is 21, everywhere, regardless of state law.

The age gate also runs offline. If the network is down the check still happens on the device and the audit record is written when the sale syncs. There is no way to sell a 21+ item without it.

4.5 Attach a client by number or phone

- 1 On the basket, tap the **client** area to open the keypad, or tap **Client** in the bottom bar.
- 2 Key the customer's **client number** — six digits, printed on their receipt as **MC#####** — or their **mobile number**. Or scan the QR on their card.
- 3 Or search by **name, client number, mobile or e-mail** on the Client screen and tap **Attach to sale**.
- 4 The basket now shows their name, their tier and their point balance, and the reward tiers they can afford appear at Pay.
- 5 Not a member yet? Tap **New client** and take their name, mobile and e-mail — see Section 8.

A search needs at least three characters. You can find a customer who normally shops at another store — the chain is one customer book — but a bulk list of the chain's customers is not something a store login can pull.

4.6 Take cash, card, or a split

Cash

- 1 Tap **Cash**. Key what the customer handed you in **Cash taken**.
- 2 The till shows the **Change** to give back. Tap **Complete cash sale**.

Card

- 1 Tap **Card**. The amount goes to the **Verifone V660p** reader paired to this device.
- 2 Ask the customer to tap, insert or swipe. Do not hand them your phone — the reader is the customer-facing device.

- 3 Wait for the approval. The tender is stored with the card brand, the last four digits and the approval reference.

Split

- 1 Tap **Split**. Key the **cash** part first; the till shows what is left.
- 2 Take the remainder on the card. The invoice books two payment rows that add up to the total.

IF THE CUSTOMER IS REDEEMING A REWARD

The Pay screen shows only the tiers they can actually afford — **\$5 off at 100 points, \$10 at 200, \$15 at 300** — and how far away the next one is. One reward per transaction. The reward comes off the total after tax.

4.7 Print and e-mail the receipt

- 1 The receipt prints by itself as soon as the sale completes. The till tries, in order: the **reader's own printer**, then the **counter printer** over the store network, then the browser's print dialog. If one route fails it falls through to the next.
- 2 To reprint, tap **Print** on the receipt screen.
- 3 To e-mail it, type the address in **E-mail address** on the same screen and send. The customer gets a link to the public receipt.
- 4 The customer can also scan the **QR on the paper receipt**, which opens the same page — their lines, their points, their balance, and a private 1–5 rating of the visit.

4.8 Take a return

- 1 From the Sell screen open **Returns**.
- 2 **Find the sale** — scan the QR on their receipt, type the invoice number, or search the customer by name, phone or client number.
- 3 **Tick the lines** coming back. Set the quantity (or pick the serial), then a **reason** (Change of mind, Defect, Sizing, Gift return, Other) and a **condition**: **Sellable** goes back on the floor, **Damaged** goes to the store's damaged stock and cannot be sold again.
- 4 Choose the **refund**: **Original card** (only if the sale was paid by card, and never more than was charged), **Cash** from the drawer, or **Store credit** (needs a named customer).
- 5 If the refund is over **\$2,500** including tax, or the sale is more than **30 days** old, the till opens the **Manager PIN** sheet. Fetch a manager. If a manager is the one signed in, it is approved automatically.
- 6 Confirm. The credit note is created, the money goes back, and the **return receipt** prints with a RETURN banner, the original sale, the approver and the reason.

What happens behind the scenes: the points the customer earned on those lines disappear — the balance never goes below zero — and the commission reverses against whoever originally sold it, not against you.

4.9 Do an exchange

- 1 Start exactly as a return: find the sale and tick the lines coming back (4.8, steps 1–3).
- 2 Instead of choosing a refund, tap **Exchange**. The selected lines carry across.
- 3 **Pick the new items** from the catalogue on the Exchange screen.

- 4 The till works out the settlement itself and shows one of three things:
 - **Client pays** — take the difference on card or cash.
 - **Refund to client** — give the remainder back on card, cash or store credit.
 - **Even exchange** — nothing changes hands.
- 5 One tap writes both documents. The exchange window is **60 days**; past that, a manager PIN.

4.10 Work offline — and what the queue means

The till is built to keep trading when the internet is not there. This is normal, not an emergency.

What still works

- The whole catalogue, prices, tax and tiles — they are cached on the device.
- Scanning, discounts, promotions already loaded, and the **21+ age gate**.
- Taking **cash**, completing the sale, and printing the receipt.

What does not

- Charging a card on the reader, clocking in or out, looking up a sale for a return, searching for a customer who is not already on the screen, and web orders. All of these need the server.

What to do

- 1 The top bar turns to **OFFLINE**. Carry on selling; take cash.
- 2 Each completed sale is written into the device's **queue** and the bar reads **OFFLINE · 1 QUEUED**, then 2, and so on.
- 3 The receipt still prints. The QR link on it will not open until that sale has synced.
- 4 When the connection comes back the queue **sends itself**. Open **Queue** to watch the rows go from pending to ok, and to press **Retry** on anything stuck.

THE ONE RULE

A queued sale is a real sale. Never ring it again. Every queued sale carries its own identifier, and if it is sent twice the server recognises it and returns the invoice it already made — so a customer can never be charged twice by a replay. But ringing the same basket a second time by hand creates a genuine second sale, and that has to be voided by a manager.

Head-office numbers, point balances and stock levels do not move until the queue has drained. If the dashboard looks light and a store's bar says QUEUED, that is why.

4.11 Clock in and clock out

- 1 On the unlock screen choose **Clock in**, tap your name and key your PIN. Your shift starts.
- 2 Tap **Shift** during the day to start or end a **break**; the break minutes are tracked separately from worked minutes.
- 3 At the end, choose **Clock out** on the unlock screen and key your PIN. **Clocking out never opens the till.**

Clocking needs a connection — it writes to the server immediately. If the till is offline, clock in as soon as it is back and tell your manager the real time you started.

4.12 End of day — the X and Z report

Both live on the **Shift** screen. An **X report** is a look at the day so far and changes nothing. A **Z report** is the close: you count the drawer and record the variance.

- 1 Open **Shift**. The day summary shows **Gross**, **Net sales**, **Tax**, **Invoices**, **Avg ticket**, the **Tenders** broken down by cash and card, and **Device sales**.
- 2 Read it during the day as often as you like — that is the X report.
- 3 At close, count the drawer and key the total into **Counted cash** under **Cash drawer close**.
- 4 The screen shows the **Variance** against what the till expected — cash taken minus change given. Investigate anything that is not small.
- 5 Tap **Print** for the paper copy.

Returns and voids are already netted off; you do not subtract them yourself. Before you close, check the **Queue** is empty — an unsent sale is not in the numbers yet.

SECTION 5

Store manager — how to

Everything in Section 4, plus the six things only you can do. You are scoped to your own store: you will not see another store's anything.

5.1 Approve a price change

Prices are not edited on the till. A price change is a **request** that head office or your regional approves, and once approved it becomes a pricing rule that applies to **your store only**.

The **Admin desk** card is not on your launcher, but the link at the foot of `/start` opens it — and the desk shows you only your own store's records.

- 1 Open the admin desk at `/app` and create an **AWANZ Price Change Request**.
- 2 Fill in the item, your store, the **proposed rate** and the dates it should run between. The current rate is filled in for you.
- 3 Submit it. The request moves to **Pending Approval** and head office is notified.
- 4 Head Office or Regional **approves** or **rejects** it. On approval the platform creates the pricing rule automatically, scoped to your store's warehouse — no other store is affected.
- 5 The new price reaches the tills at the next catalogue refresh. Ask your team to pull down to refresh, or reopen the till.

A request whose proposed rate equals the current rate is refused, and so is a zero or negative rate. Cancelling an approved request disables the pricing rule it created.

A DISCOUNT ON ONE SALE IS NOT A PRICE CHANGE

To take money off a single basket, use the line discount on the basket or a coupon code — that needs no approval and is recorded against the sale. A price change request is for a price that should hold for days or weeks.

5.2 Request stock from the warehouse

- 1 On the till open **Receive**. The screen has three parts: **From the warehouse** (what is on its way), **Vendor deliveries (POs)**, and **My requests**.
- 2 Tap **Request from warehouse**.
- 3 **Add item** for each line and set the quantity, or search the catalogue.
- 4 Add a **Reason** if it helps Houston prioritise, then **Send request**.
- 5 The request appears in Houston's approval queue immediately. Watch its status under **My requests**.

The one-tap route: on the **Shift** screen, anything below its reorder level appears under **Low stock** with a **Request from warehouse** button beside it. One tap raises the request at the suggested quantity. Use this — it is faster and it flags the request as “low stock” priority on the warehouse wall.

Houston may **cut the quantity** or **reject** the request with a reason, and you will be told either way. A rejected request is not a lost request — read the reason and raise a new one.

5.3 Receive a delivery by scanning

- 1 Open **Receive** on the till. The shipment appears under **From the warehouse** with what Houston says is in the box.

- 2 Tap it to open the count sheet.
- 3 **Scan each item** as you take it out of the box — one scan per unit — or tap the line and key the quantity. The counted number climbs as you go.
- 4 Anything that does not match what was sent is **highlighted**. Do not correct it to make it match: count what is actually there.
- 5 If the box is only half unpacked, save a **partial count** and come back to it. The shipment stays open until you confirm the final count.
- 6 Confirm the receipt. The stock moves into your store and is sellable immediately.

Any short, over or damaged line raises a **receiving discrepancy** that goes back to Houston for them to resolve. That is the audit trail — resolve it honestly rather than adjusting the count.

Vendor purchase orders addressed to your store are received on the same screen, under **Vendor deliveries (POs)**.

5.4 Run a cycle count

- 1 Open **Cycle count** from the till (also reachable from the Shift screen).
- 2 Tap **New count** and choose what you are counting.
- 3 For quantity items, key the counted number per line. For serialised items, **scan each serial label**; the screen tracks **Serials scanned** against **Remaining**.
- 4 Anything you scan that was not expected shows as **Unexpected**; anything expected that you did not find shows as **Unaccounted**.
- 5 Tap **Review**. The screen tells you either “Counted quantities match” and “Every expected serial was scanned”, or it lists the **Quantity differences** and the **Unaccounted serials**.
- 6 Submit. The count is recorded and, where there are differences, a draft stock reconciliation is raised for head office to check and post.

5.5 Approve a return over the threshold

The till asks for you in exactly two situations: the credit is over **\$2,500 including tax**, or the sale is outside its window — **30 days** for a refund, **60 days** for an exchange.

- 1 The associate reaches the Manager PIN sheet and calls you over.
- 2 Check the sale yourself: the original invoice, the reason and the condition of the goods.
- 3 Pick your **name** from the manager list on the sheet and key **your own PIN**. Never give your PIN to an associate to type.
- 4 The return completes and the credit note records that **you** approved it. That is on the printed return receipt.

If you are the one signed in to the till, the approval is implicit and no sheet opens. Voids also need a manager — and note that a void has no amount limit today, so treat it as a policy matter, not a technical one.

5.6 Manage your associates and reset a PIN

You run your own shop floor: you may create, edit and disable associates **in your own store, at associate level**, and reset their PINs.

Reset a PIN

- 1 The associate has locked themselves out after five wrong attempts, or has forgotten their PIN. Nobody can look the old one up — it does not exist in readable form.
- 2 Open the associate’s record and use **reset PIN**. Choose a new 4-digit PIN and tell them privately.

- 3 The lockout clears with the reset. They can unlock straight away.

Add or disable an associate

- 1 The person needs a site login first — head office creates the user account.
- 2 Attach them to **your store** at **Associate** level and set their opening PIN.
- 3 When someone leaves, set their record to **disabled** rather than deleting it, so their past sales, commission and shifts stay intact.

WHAT YOU CANNOT DO — BY DESIGN

You cannot appoint another manager, move somebody between stores, reset another manager's PIN, or give anyone a role above your own. Those are head-office actions. The platform enforces this at four separate levels, so there is no way around it and no point trying — an attempt returns a permission error and is written to the security log.

SECTION 6

Warehouse admin — how to

Houston, HOU-WH. You are the only role that can approve a store's request, pick it, buy a label and ship it. You cannot sell.

6.1 Approve, edit the quantity, or reject

- 1 Open `/warehouse`. The **Replenishment requests** tab lists everything waiting, with the store, the lines, the age of the request and its priority.
- 2 Open a request. You see what the store asked for and what is on hand at HOU-WH beside it.
- 3 **Approve** it as asked, or edit the quantity per line first if you cannot fill it in full and then approve.
- 4 Or tap **Reject...** and give a **rejection reason**. The store manager is notified with your reason — write something they can act on.
- 5 On approval the platform raises an **AWANZ Shipment** in **Pending**, and the wall immediately prints the packing list.

6.2 Pick, pack, buy the cheapest label, ship

Pick

- 1 Open the shipment. The **Pick list** names the **bin** and the on-hand quantity for every line.
- 2 Tick each line as you pull it. When they are all ticked the sheet says **All picked**.

Pack

- 1 Build the parcels. **Add parcel** for each box and confirm its weight and dimensions.
- 2 Weights come from the item records plus the box, and anything missing falls back to a conservative default so a rate can always be quoted — **check anything unusual by hand**. A four-foot bong is not a default box.
- 3 **Save & mark Packed**.

Buy the label

- 1 Tap for rates. Carrier services come back priced by weight and destination — on this site, eight of them.
- 2 The **cheapest is already selected**. Toggle **Fastest**, or pick any row, if the store needs it sooner.
- 3 Buy it. The tracking number is stored on the shipment and the wall prints the label.

A LABEL IS MONEY — YOU ONLY GET ONE

The platform refuses to buy a second label for a shipment that already has one. If you genuinely need to replace it, use the explicit replace option: the voided label's carrier, service and tracking are written to the shipment's notes so you can find them — and **you still have to refund the unused label in the carrier's own dashboard**. The platform cannot do that for you.

Ship

- 1 Tap **Ship** when the parcel leaves the building.
- 2 The stock moves out of HOU-WH into that store's **In Transit** location — so it is never "nowhere". It only lands in the store when someone there counts it in.
- 3 Tracking refreshes on its own; the shipment shows its status on the desk and the wall.

6.3 The 55-inch wall and its auto-printing

`/warehouse-wall` is the board for the packing floor. Five columns, left to right:

COLUMN	WHAT IS IN IT
Pending approval	Store requests nobody has decided on yet.
To pick	Approved shipments waiting to be pulled.
Packing	Picked, being boxed.
Ready to ship	Packed and labelled — waiting for the carrier.
Shipped today	Gone. Clears itself overnight.

- Cards are ordered by **priority** first — Urgent, then Low stock — and then by how long they have been waiting, so the oldest is on top.
- Every card carries an **age timer**. It turns **amber at 4 hours** and **red at 24**. A red card means a store has been waiting a day.
- A newly approved shipment **flashes and sounds** so the floor notices without watching.
- Tap a card to Pick, Pack, Buy a label, Print or Ship without leaving the wall.

Auto-printing

The wall prints two documents with nobody touching a dialog: the **packing list** when a shipment is approved, and the **carrier label** when a label is bought. For that to work the machine driving the wall must run Chrome in kiosk-printing mode and have a default printer set.

THE TWO-PRINTER LIMITATION — KNOW THIS BEFORE BUYING HARDWARE

Kiosk printing always goes to the machine's **default** printer, and Chrome offers no way to pick a different printer per document. So one machine cannot send packing lists to the laser and labels to the 4x6 thermal printer.

The recommended answer is **two machines**: the wall PC's default printer is the laser (packing lists), and a second small PC at the pack bench runs its own kiosk browser with the thermal printer as its default. The alternative is to leave label auto-printing off and press **Print label** by hand, choosing the thermal printer in the normal dialog.

6.4 Discrepancies, cancellations and stuck shipments

- **A store reports a short.** Their count raises a **Receiving discrepancy** on your desk. Open it, work out what happened and **Resolve** it with a reason. That reason is the audit trail — do not delete the row.
- **A shipment is stuck in Pending.** Nobody has picked it. The wall's timer is telling you: amber at 4 hours, red at 24.
- **Rates come back empty.** Check the store has a complete address including ZIP, and that the carrier account is configured. If switching to the simulated carrier makes rates appear, the problem is the carrier account, not the platform.
- **A shipment has to be cancelled.** Cancelling puts the store's request back to **Pending Approval**, cancels the stock document behind it and notifies the store. Approve it again to raise a fresh shipment, or reject it with a reason.
- **Nothing prints.** Confirm the browser is running with kiosk printing — not merely kiosk mode — that a default printer is set for that user, and that auto-printing is switched on in settings.

SECTION 7

Head office — how to

The Command dashboard at `/awanz-dashboard`, plus the promotions, coupons and campaigns that live in the admin desk.

Open `/awanz-dashboard`. Six tabs across the top: **Live** · **Stores** · **Products** · **Clients** · **Insights** · **Reports**. It is built for a wall screen as well as a laptop and re-scales its type to suit, so the same board reads correctly at 1920×1080 and at 4K.

7.1 Live

- The **KPI strip**: net today and how that compares with the same weekday last week, invoices, card versus cash, average ticket, returns, pending approvals, low-stock count, and open feedback rated 2 or below.
- The **chain ticker** — the last ten sales across the estate, with no customer details on it.
- **One card per store**, ranked by net, showing tickets, versus last week, the last thing sold and how long ago. **A card pulses when that store rings a sale** — within about a second.
- Filter by region, search, or sort. Tap a card to drill into that store's own item-level feed and its hour-by-hour bars.
- Below: the chain's hourly chart and the low-stock tile.

TWO THINGS TO KNOW ABOUT THE LIVE BOARD

The warehouse is not a store. HOU-WH is deliberately excluded from the store cards and the league table — you will see eleven cards, not twelve.

The hourly chart's "current hour" follows the viewer's own timezone while the clock beside it shows store time. On a board in Houston they agree. Viewing from another timezone puts the highlight on the wrong column; the peak label is still correct.

7.2 Stores

A sortable table of the whole estate: net today, week to date and month to date, versus last week, tickets, average ticket, conversion (how many tickets had a named customer), returns as a percentage, stock value, low-stock count, how many associates are on shift, and a 14-day sparkline. Click any row for that store's page — hourly, top items, associates, recent sales, alerts and customer feedback.

7.3 Products

- **Trending in stores** — every product ranked by how its velocity has changed: units in the last 7 days against the 7 before, and against a 28-day baseline. Each carries a badge: **Trending up**, **New**, **Cooling** or **Steady**. Filter by group or badge. The columns also show how many stores are selling it, sell-through and days on hand.
- **Top products by store** — pick a store or view all, ranked by revenue or by units, with each item's share of that store's sales, plus a group-by-store matrix.

These read a table the platform recomputes every 15 minutes, which is why the tab loads instantly. If you need it up to the minute, recompute it on demand from the tab.

7.4 Clients

- **Churn risk** for the top tiers, with **Assign call** — which creates a follow-up task for an associate.
- **Follow-up rate per associate**: tasks done against tasks assigned over 30 days.

- **Upcoming dates** — birthdays and anniversaries coming up, for clienteling.
- **Associate performance** and **campaign performance** cards.

7.5 Insights

The weekly intelligence run: next-best-offer recommendations per customer, customer signals (shopping cadence, churn risk, important dates), product performance with **rebalance suggestions** you can act on in one click, and a written weekly narrative.

7.6 Reports and CSV export

Eleven reports, each of which can be read on screen or downloaded as CSV. The Reports tab also does period-over-period comparison.

GROUP	REPORT	WHAT IT IS FOR
Tax	Sales Tax Summary	Taxable versus non-taxable sales, tax collected, returns netted, by store and jurisdiction. This is the filing report.
Sales	Daily Sales	Per store per day: gross, discounts, returns, net, tax, cash, card, tickets, average ticket, items per ticket.
Sales	Sales by Item	By item, item group or department.
Sales	Sales by Associate	Tickets, net, average ticket and how often a customer was attached.
Sales	Hourly Sales Heatmap	Weekday × hour per store — this is your rostering evidence.
Clients	Client Purchases	Recency, frequency, monetary value, tier and lifetime spend per customer.
Inventory	Serial Ledger	Every serialised unit: received, sold, returned, transferred, and where it is now.
Returns	Returns	Credit notes by reason, store and associate — or line by line.
Employees	Commission Statement	Commission per associate with reversals netted. CSV for payroll.
Marketing	Promotion Performance	Pricing rules and coupons: redemptions, discount given, revenue, discount rate.
Marketing	Campaign Performance	Sends, opens, clicks, and revenue attributed directly and as an assist.

- 1 Open the **Reports** tab and pick the report.
- 2 Set the filters — dates, store, grouping.
- 3 Read it on screen, or download the **CSV** straight from the tab. The CSV carries the same rows and the same column headings you see.

Every report is store-scoped: a store manager running the same report gets their own store only. Payroll exports for Gusto, ADP, QuickBooks or the built-in HR module are separate and are run by head office for a date range.

7.7 Promotions and coupons

- **Promotions** are ERPNext pricing rules. They apply themselves on the basket and appear to the associate in the **Promotions** chip. Create them in the admin desk with the item, group, store and dates they should run.
- **Coupons** are **AWANZ Coupon** records: single-use or multi-use, optionally bound to one customer and optionally restricted to an item group. The associate types or scans the code at the till, and the till checks it against the basket before it is accepted.

- The **promotion calendar** holds one row per month with that month's rules and featured items; the platform sends it as a campaign on the 1st.
- Measure both with the **Promotion Performance** report.

TELL THE STORES BEFORE YOU CHANGE ANYTHING

Tills read promotions, coupons and reward tiers from the platform, so a change made here is live at the next catalogue refresh — which may be mid-shift. Associates will be asked about it at the counter before you have finished writing the e-mail.

7.8 Campaigns

- 1 Create an **AWANZ Campaign** in the admin desk: a title, a channel (Email, SMS, Event or Private viewing), a send date, an optional coupon and a cost.
- 2 Build the **segment** from tier, store, customer signal, item or item group — the conditions are combined, and leaving them blank means everyone. Preview the count before you send.
- 3 Add **featured products** if the campaign is about specific items; that turns on item-level attribution.
- 4 **Export the segment** as CSV for your e-mail tool, or push it to a mailing group.
- 5 Touches come back automatically from a connected provider through a signed webhook, or you can record them by hand for an event guest list.
- 6 Attribution runs nightly: the most recent touch within **14 days** of a sale is credited as **direct**, anything else within **30 days** as an **assist**, and a campaign that featured an item in the basket is credited for those lines specifically.
- 7 Read the result in **Campaign Performance**.

SECTION 8

CloudChaserz Rewards

What to say at the counter: the programme in the customer's words, and the five things staff get asked about.

THE PROGRAMME, IN ONE BREATH

"Earn **1 point for every \$1** you spend. Redeem your points for money off at the counter, get a birthday gift, hear about every monthly promotion and new arrival first, enter product giveaways and receive exclusive event invites."

QUESTION	WHAT TO SAY
"How do I earn?"	\$1 = 1 point , on what you spend on goods. Points are worked out before sales tax, so the rate is the same in every store.
"What are they worth?"	\$5 off at 100 points. \$10 off at 200. \$15 off at 300. One reward per transaction.
"Do they expire?"	Not while the account is active.
"Do I need a card?"	No. Your points are tied to you — your phone number or your e-mail — so there is nothing to lose. Just give us your number.
"What else do I get?"	A birthday discount — 15% off, sent to you a week before your birthday and good for 30 days. Every monthly promotion first. New arrivals the week they land. Giveaway entries , one for every \$25 you spend. And invitations to in-store events.

8.1 Sign someone up at the till

- 1 Open **Client** on the till and tap **New client**.
- 2 Take their **name**, **mobile number** and **e-mail**. Ask for their **birthday** — say why: "so we can send you your birthday discount."
- 3 Ask, out loud, whether they want to hear from you by e-mail and by text, and set the two consent switches to whatever they actually said. Do not tick them by default.
- 4 Save, then **Attach to sale**. They start earning on the basket in front of you.
- 5 Their **client number** is on the receipt. Tell them they can quote that number, or just their phone number, next time.

8.2 Sign up on /rewards

Customers can join themselves at <https://cloudchaserz.frappe.cloud/rewards> — the join form takes name, mobile, e-mail, birthday, a home store and the two consent boxes. The page also lists the giveaways and events running right now, which is the reason to point people at it. They can also join on the client display at the counter while you are ringing the sale.

If someone signs up online with a phone number or e-mail we already have, the page gives a friendly acknowledgement and changes nothing on the existing record. That is deliberate — it stops anyone rewriting a stranger's account. If a customer says "I signed up but nothing happened," look them up at the till: they were probably already a member.

8.3 Redeem at the counter

- 1 Attach the customer **before** going to Pay.
- 2 The Redeem sheet shows **only the rewards they can afford right now**, and how many points away the next one is. If nothing is listed, they are under 100 points — tell them how close they are.
- 3 Tap the tier. The basket total drops by \$5, \$10 or \$15.
- 4 Take the remaining balance as normal. One reward per transaction, and a reward can never be bigger than the bill.

8.4 When something comes back

Returning a sale takes the points back with it. Say it plainly: “the points you earned on that item come off again.” Two things to reassure them about:

- **The balance never goes below zero.**
- **A reward they already used comes back** when the sale it was used on is returned.

Every receipt prints the numbers, so you can always show the customer rather than argue:

ON EVERY MEMBER'S RECEIPT

POINTS EARNED	173
POINTS BALANCE	423
NEXT REWARD	\$10 AT 200 PTS
GIVEAWAY ENTRIES	6

8.5 What not to promise

- Do not quote a reward that is not on the screen. The till reads the tiers from the platform, and head office can change them.
- Do not stack rewards. One tier per transaction.
- Do not promise a reward larger than the bill — it will be refused.
- Do not promise a giveaway result. Winners are drawn from a recorded seed so the draw can be audited and reproduced; nobody at a store picks the winner.

SECTION 9

Troubleshooting

The nine things that actually happen, what each one means, and what to do about it.

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
The PIN is refused	Almost always the wrong name is selected on the unlock screen. The two associate PINs are the same in every store, so the PIN only works against the right person.	Go back, tap your own name, key the PIN again. Read the message: “incorrect PIN” means try again; “PIN locked after too many failed attempts” means five wrong tries have locked it and a manager must reset it (5.6). Guessing is also rate limited, so slow down rather than hammering it.
The catalogue has not loaded	The device has never had the catalogue, or its cache was cleared. Tiles are blank or the search finds nothing.	Check the top bar. If it says ONLINE , pull down to refresh, or go to Settings → Catalog → Refresh cache and wait. If it says OFFLINE , the device has nothing to load from — get a connection, then load the catalogue before opening the store. Load the catalogue on a fresh device while you still have signal.
No network	The top bar reads OFFLINE . The till is still fully usable for cash sales.	Keep selling and take cash. You cannot charge a card, clock in or out, look up a sale for a return, or work web orders. See 4.10 for the whole list. Tell your manager; check the store's router and the tablet's Wi-Fi.
“OFFLINE · 3 QUEUED”	Three completed sales are waiting on the device to be sent. They are real sales — they are just not on the server yet.	Do not ring them again. When the connection returns the queue sends itself; open Queue to watch. Anything stuck has a Retry button. If a row still fails, note the time and total and call your manager — do not discard it. Head-office numbers and point balances will not move until the queue is empty, so clear it before you close the day.
The printer is not responding	The receipt route failed. The till tries the reader's printer, then the counter printer over the network, then the browser.	Check the obvious first: paper, lid closed, power. Then Settings → Printer — the printer's IP address must be right, and the receipt route should be Automatic . Use Test reader print to see which route is failing. As a stop-gap, print from the browser dialog or e-mail the receipt to the customer (4.7). The sale is complete either way — a printing problem never costs you the sale.
The card reader is not found	The device is not paired to a reader, the reader is off the Wi-Fi, or someone picked a reader that is not on this counter.	Check the reader is powered and on the store Wi-Fi. Then Settings → Card reader and pick the right one — each store has more than one registered, e.g. Counter 1 · V660p and Counter 2 · S710. The choice is remembered per device. Take cash while you sort it out.
An age-restricted item is blocked	The check returned Underage , Expired , Unreadable or Declined . The item never entered the basket.	Underage or expired: the sale does not happen. Remove the item and say so politely; the minimum age is 21 everywhere and there is no override. Unreadable is different — the barcode did not scan. Use Try another ID , or key the date of birth by hand from the front of the licence. Never wave an item through because the scanner is being difficult.
“You don't have access to that store”	You are signed in as someone attached to a different store, or the device is still set to a store you no longer work in. Every screen is scoped to one store on purpose.	Check the name in the corner is yours. On the till, Settings → Change boutique to your own store; if your store is not in the list, your account is attached elsewhere and head office has to move it — a store manager cannot. If you have genuinely transferred, ask head office to re-point your record.

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
The dashboard looks empty	Either nothing has sold yet today, or a store's sales are sitting in an offline queue.	Look at the store cards: a store showing NO SALE YET · OFFLINE has not checked in. Ring one sale anywhere and the board moves within a second. If a card shows queued sales, the till has them and has not sent them.

WHEN TO ESCALATE

Anything that stops you taking money, anything where a customer may have been charged twice, and anything that looks like data from another store, goes to your manager immediately and then to head office. Note the time, the till, the invoice number if there is one, and what the screen said — those four things make the difference between a fix and a guess.

SECTION 10

How the whole system fits together

Four pictures: the map, a sale, money back and stock in, and online orders and rewards. Each is one landscape page and each is also supplied as a standalone file.

The four figures overleaf are the mechanism, not decoration. Read **Figure 1** to see where data goes: the devices in a store, the single cloud site they all talk to, the Houston head office and warehouse, and the public storefront. Read **Figure 2** for the life of one sale, including exactly what changes when the network drops. **Figure 3** is money going back and stock coming in — and it marks, in red, every point where somebody has to approve something. **Figure 4** covers a web order collected at a counter, and the life of a rewards point.

FIGURE	WHAT IT ANSWERS	STANDALONE FILE
1 — System map	What is in a store, what the platform does, what Houston does, and which call carries which data.	diagrams/fig1-system-map.svg
2 — The sale	Counter to books in seven steps, plus the offline queue and why a replayed sale cannot double-post.	diagrams/fig2-sale-and-offline.svg
3 — Money back, stock in	Return and exchange; and request → approve → pick → pack → label → ship → receive.	diagrams/fig3-returns-and-replenishment.svg
4 — Online and rewards	Web order to click & collect; and a point from sign-up to reversal.	diagrams/fig4-online-and-rewards.svg

All four are also collected in `awanz-system-flowchart.pdf` , one figure per page, for printing at A3 or pinning up in the back office.

How AWANZ POS fits together

One cloud site · 11 stores · the Houston head office and main warehouse · the public storefront

FIGURE 1

cloudchaserz.frappe.cloud

A sale — from the counter to the books

FIGURE 2

What the till does, what the cloud writes, what head office sees — and what changes when the network drops

cloudchaserz.frappe.cloud

□ written by the platform □ a gate or an offline constraint □ an action at the counter

Money back, and stock in

A return or exchange at the counter, and the replenishment loop between a store and the Houston warehouse

FIGURE 3

cloudchaserz.frappe.cloud

A. RETURN AND EXCHANGE at the till · /pos → Returns · the manager approves only when policy says so

EXCHANGE INSTEAD: the same lines carry over to the Exchange screen. Pick the new items; the till shows Client pays (the difference, card or cash), Refund to client (the remainder), or Even exchange. One tap writes both documents; the credit moves through the Exchange Credit account, which nets to zero, so only the difference ever touches cash or card.

B. REPLENISHMENT — STORE ASKS, HOUSTON SHIPS only the warehouse admin may approve, pick, buy a label or ship

THE WALL (/warehouse-wall)

Five columns — Pending approval · To pick · Packing · Ready to ship · Shipped today. Cards are ordered by priority (Urgent, then Low stock) and then by how long they have waited. The age timer turns amber at 4 hours and red at 24. A newly approved shipment flashes and sounds. Under Chrome kiosk-printing, the packing list and the label print with no dialog. One kiosk browser can only print to the machine's default printer — so the wall PC prints packing lists and a second machine at the pack bench prints labels.

Partial receipts are supported: save the count as many times as needed; the shipment stays Shipped until the final confirmation. Cancelling a shipment puts its request back to Pending Approval, cancels the Material Request and tells the store. A second label is refused unless replace=1 is passed — and the voided one still has to be refunded in the carrier's own dashboard.

written by the platform someone has to approve an action by a person

Online orders, and CloudChaserz Rewards

FIGURE 4

A web order collected at a store counter, and how a point is earned, spent and taken back

cloudchaserz.frappe.cloud

A. WEB ORDER → CLICK & COLLECT

the shopper pays online; the store hands the goods over and invoices only the balance

B. A POINT, END TO END

\$1 = 1 point · \$5 off at 100, \$10 at 200, \$15 at 300 · one reward per transaction

WHAT NOT TO PROMISE

Points are tied to the member — their phone number or e-mail — not to a card, so there is nothing to lose. They do not expire while the account is active. Only one reward tier may be used per transaction. A reward cannot be larger than the bill. And do not quote a tier that is not on the screen: the till reads the tiers from the platform, so a change made at head office is live at the next catalogue refresh.

WHERE THE DATA ENDS UP

Live board

every sale, within a second: net, tickets, card/cash, returns, low stock, pending approvals, open feedback

Products

a table recomputed every 15 minutes: trending up, new, cooling, steady — chain-wide and per store

Clients

churn risk by tier, follow-up rate per associate, upcoming birthdays, campaign attribution

Reports

eleven reports, each with CSV — tax filings, daily sales, associate, item, RFM, returns, commission

☒ written by the platform ☐ a rule staff must not overstate ☐ an action by a person

SECTION A

Appendix A · Store directory

The eleven stores and the Houston main warehouse, as the platform holds them.

CODE	STORE	ADDRESS	PHONE	REGION	HOURS	SALES TAX
HOU-MTR	CloudChaserz Montrose HQ STORE	2037 W Alabama St, Houston, TX 77098	(281) 974-3712	Houston	9:00–24:00	8.25%
OK-SAP	CloudChaserz Sapulpa	515 N Mission St, Sapulpa, OK 74066	(918) 347-8062	Oklahoma	9:00–22:00	9.5%
OK-BA	CloudChaserz Broken Arrow	6420 S Elm Pl, Broken Arrow, OK 74011	(539) 367-1226	Tulsa Metro	9:00–22:00	8.417%
OK-BIX	CloudChaserz Bixby	11063-B S Memorial Dr, Tulsa, OK 74133	(918) 364-8300	Tulsa Metro	9:00–22:00; Fri 9:00–24:00, Sat 9:00–24:00	8.917%
OK-STUL	CloudChaserz South Tulsa	2606 S Sheridan Rd Suite H, Tulsa, OK 74129	(918) 764-8161	Tulsa Metro	9:00–22:00	8.517%
OK-OWA	CloudChaserz Owasso	8351 N Owasso Expy, Owasso, OK 74055	(918) 554-5217	Tulsa Metro	9:00–22:00	8.917%
OK-MUS	CloudChaserz Muskogee	102 S 24th St W, Muskogee, OK 74401	(918) 685-0433	Oklahoma	8:00–02:00	9.15%
OK-MINGO	CloudChaserz Mingo	8033 S Mingo Rd, Tulsa, OK 74133	(539) 367-3892	Tulsa Metro	8:00–24:00	8.517%
OK-ETUL	CloudChaserz East Tulsa	1660 E 71st St STE E, Tulsa, OK 74136	(918) 574-2521	Tulsa Metro	9:00–22:00	8.517%
OK-YALE	CloudChaserz Yale	3205 S Yale Ave Suite C, Tulsa, OK 74135	(918) 393-8201	Tulsa Metro	9:00–22:00	8.517%
OK-JENKS	CloudChaserz Jenks	541 W Main St, Jenks, OK 74037	(918) 228-7009	Tulsa Metro	9:00–22:00; Fri 9:00–24:00, Sat 9:00–24:00	8.917%
HOU-WH	CloudChaserz Main Warehouse NOT A STORE	2037 W Alabama St (Head office), Houston, TX 77098	(281) 974-3712	Houston	8:00–17:00; Sat closed, Sun closed	—

All stores run on **America/Chicago** time. **HOU-WH** is a warehouse, not a store: it owns stock and appears in the supply flows, but it is excluded from store lists, sales league tables and the storefront.

⚠ **TAX RATES — VERIFY WITH THE CPA BEFORE TRADING**

The rates above are **approximate combined state and local sales-tax rates**, entered so that demo totals look right. Before the first live sale, have the CPA confirm the exact combined rate for each store's taxing jurisdiction — they change, and the city, county and special-district components differ by address, not by city name.

Not modelled at all: Oklahoma and Texas **vapor and tobacco excise taxes**, which are levied separately from sales tax and may apply at wholesale or at retail depending on the product class. Kratom and hemp-derived products have their own state treatment again. Model all of these with the CPA before trading.

⚠ **COMPLIANCE — VERIFY WITH COUNSEL**

The federal minimum age for tobacco and nicotine is **21** and the platform refuses anything younger regardless of state law. Beyond that: the PACT Act's registration and state-reporting obligations may attach to the business even though warehouse-to-store transfers are business-to-business; Texas and Oklahoma each license retail tobacco and vapor sellers and have their own signage, ID-check and product-registry rules; and kratom and hemp-derived cannabinoid rules are regulated separately and change frequently. **The web shop does not sell age-restricted items and that default must not be changed without counsel and a compliant carrier programme.** None of this is legal advice — it is a starting point for a conversation with the company's attorney.

SECTION B

Appendix B · Where to read more

The platform documents this guide is drawn from, for whoever administers the site.

DOCUMENT	WHAT IS IN IT
docs/security.md	Read this before granting anyone a role. The full permission model: who may do what, the three places store scoping is enforced, how PIN material is protected, what the public endpoints will and will not do, rate limits, and what is deliberately left open and why.
docs/cloudchaserz.md	The tenant: brand settings, the eleven stores and their tax rates, the role and scoping matrix, the demo users, age verification, and how a site is seeded.
docs/rewards.md	The rewards programme end to end, including the two earning and redemption rates that must not be confused, and the operating notes for when a member says their points are wrong.
docs/shipping.md	The warehouse: the flow, the carrier integration, the printing setup on the packing floor, and the runbook for stuck shipments, empty rates and wrong labels.
docs/returns.md	Returns and exchanges: the policy fields, what a return does to stock, tenders, loyalty and commission, and how exchange accounting nets out.
docs/dashboard.md	The Command dashboard: every tab, what feeds it, and how it stays fast with a hundred stores.
docs/hardware.md	The Verifone V660p decision, the alternative reader and belt printer, why Clover is not compatible, and the per-reader pairing steps.
docs/scanners.md	Supported Bluetooth scanners, the mode each one must be put in, prefix and suffix configuration, and the scanner test screen.
docs/webshop.md	The storefront: install, payment gateway, web modes, routes, the click-and-collect queue, and how to link it from a marketing site.
docs/payroll.md	Employees, shifts and breaks, commission rules and entries, and the four payroll export formats.
docs/crm.md	Client profiles, wishlists, interactions and follow-ups, and the clienteling tab on the till.
docs/salon.md	The client display: pairing, what it shows at each stage of a sale, and the privacy rules about what it is allowed to receive.
docs/biometrics-policy.md	Only relevant if camera-based client recognition is ever switched on — it is off by default. Consent wording, what is stored and what is not, the retention and destruction schedule, and the entrance signage.
docs/white-label.md	How the brand system works, for anyone changing the wordmark, the product name or the tenant.
e2e/qa/final-acceptance.md	The acceptance run on the live site: what was tested, what passed, and the three known low-severity defects.

KNOWN ISSUES AT THE TIME OF WRITING

Three low-severity defects were open at the last acceptance run, none of them blocking. The storefront home page's category tiles show understated product counts and list one empty category. The Command dashboard's hourly chart highlights the current hour in the viewer's timezone rather than the store's. And the `/start` footer offers an **Admin desk** link to everyone even though the card above it is correctly role-gated. All three are cosmetic; none affects a sale, a stock movement or a customer's points.

CLOUDCHASERZ

AWANZ POS

Training & Access Guide

Issued 24 August 2026 for the site at <https://cloudchaserz.frappe.cloud>
Covers release v0.9 · 11 stores and the HOU-WH main warehouse

Before this site takes a real customer's money: reset every password, reset every PIN, change the site administrator password, remove the demo shopper accounts, and have the CPA confirm each store's combined sales-tax rate. Section 2.6 and Appendix A.
